

CT214H – Web Programming

Practical Session 1 – HTML

Content:

- ❖ Creating a webpage
- ❖ Basic elements (paragraph, heading, etc.) and formatting (font, bold, italic, underline, etc.)
- ❖ Lists, special characters.
- ❖ Table, form, image, map, page background, etc.

Ex 1. The first webpage:

❖ Objective:

- Create a webpage with a text editor (Notepad).
- Save a webpage to disk and open it in a browser.
- Explore a basic webpage structure.

❖ Requirements:

Create the following webpage and view it in a browser:

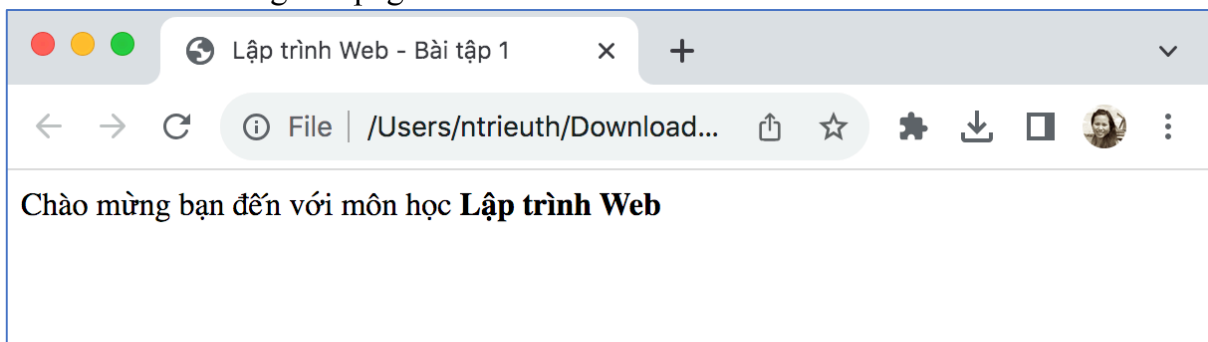

Figure 1. Welcome page

Ex 2. Run the examples in the lecture:

❖ Objective: observe how the tags work.

❖ Requirements:

- Type and run the examples in the lectures.
- Observe the results to explore the functions of the tags.
- Modify the attribute values in the examples to observe the corresponding changes in the results.

Ex 3. Create a personal page:

❖ Objective: Use the basic HTML elements to create a simple webpage, including:

- Using the content elements such as: `<p>`, `<h>`, `<br>`, `<hr>`, ...
- Formatting the elements: font, color, ...
- Inserting the images and links.
- Creating lists.

❖ Requirement:

- Create a webpage similar to Figure 2.
- Details:

- Heading color: chocolate
 - Replace the information on the webpage with your information.
 - “Kết quả học tập” links to “ket-qua-hoc-tap.html” placed in the same folder (will be created in the next exercise).
 - “Curriculum Vitae” links to “cv.html” placed in the same folder (will be created in the other exercise).
- ❖ **Hint:** proposed steps to create the required webpage:
- 1) Create a webpage with the required content and no format:
 - a. Use the tags <p>,
, <hr> to create the webpage content.
 - b. Use the tag to insert the image; the image size is approximately 100x100px (use your own image if possible).
 - c. Links: use the <a> tag with the href attribute. For the email link, use the mailto protocol.
 - 2) Format:
 - a. Font: Georgia, use the tag and the face attribute.
 - b. Size: use either the tag with size attribute or heading tag <h2>...
 - c. Color: use the tag and attribute color.
 - d. List symbol: use the type attribute of the tag

Figure 2. Personal page

Ex 4. Design the Transcript webpage as in Figure 3:

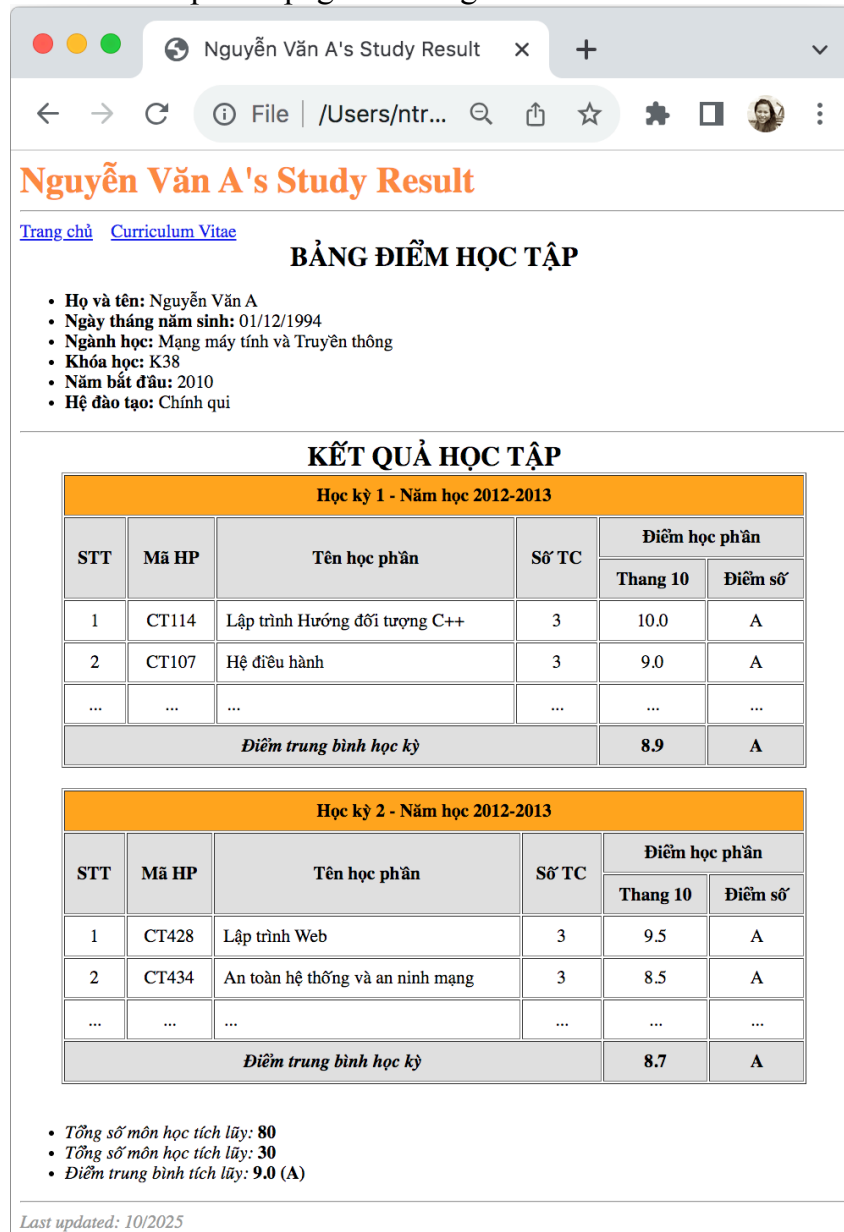

Figure 3. Transcript

- ❖ **Objective:** Use the tables, including creating tables, merging cells, aligning, etc.
- ❖ **Requirement:** Create a webpage similar to Figure 3.
 - Font: Georgia.
 - Heading color: as in Ex 3.
 - Link: “Trang chủ” links to the personal page created in Ex 3. “Curriculum Vitae” links to the “cv.html” page in the same folder (create in Ex 5).
 - Tables: the table width is 800px and centered on the screen.
- ❖ **Hint:**
 - Headings, lists, colors, etc.: similar to Ex 3.
 - Tables:
 - Width: use the width attribute of the <table> tag
 - Table alignment: use the align attribute of the <table> tag.

- Cell “STT”: merges 2 cells on the same column, using the rowspan attribute of the <td> tag. Similar “Mã HP”, “Tên học phần”, “Số TC”.
- Cell “Điểm học phần”: merge 2 cells on the same row using the colspan attribute of the <td> tag. Similar for “Điểm trung bình học kỳ”.
- Cell background color: use the bgcolor attribute of the <td> tag. o Cell alignment: use the align attribute of the <tr> or <td> tag.

Ex 5. Design the Curriculum Vitae page.

- ❖ **Objective:** Use the table, align, and insert the images inside the table.
- ❖ **Requirement:** Design a Curriculum Vitae (CV) to introduce yourself. You can use any CV template or use the template in Figure 4.
- ❖ **Hint:**
 - The content of the CV is divided into 2 parts and presented in 2 tables.
 - The 1st table includes 1 row and 2 columns. The first cell contains the header, and the second contains the image.
 - The second table includes 2 rows and 2 columns:
 - The first column: right-top aligned, using the align and valign attributes of the <td> tag.
 - The cell containing the header is merged with the remaining cells in the same row using the colspan attribute.

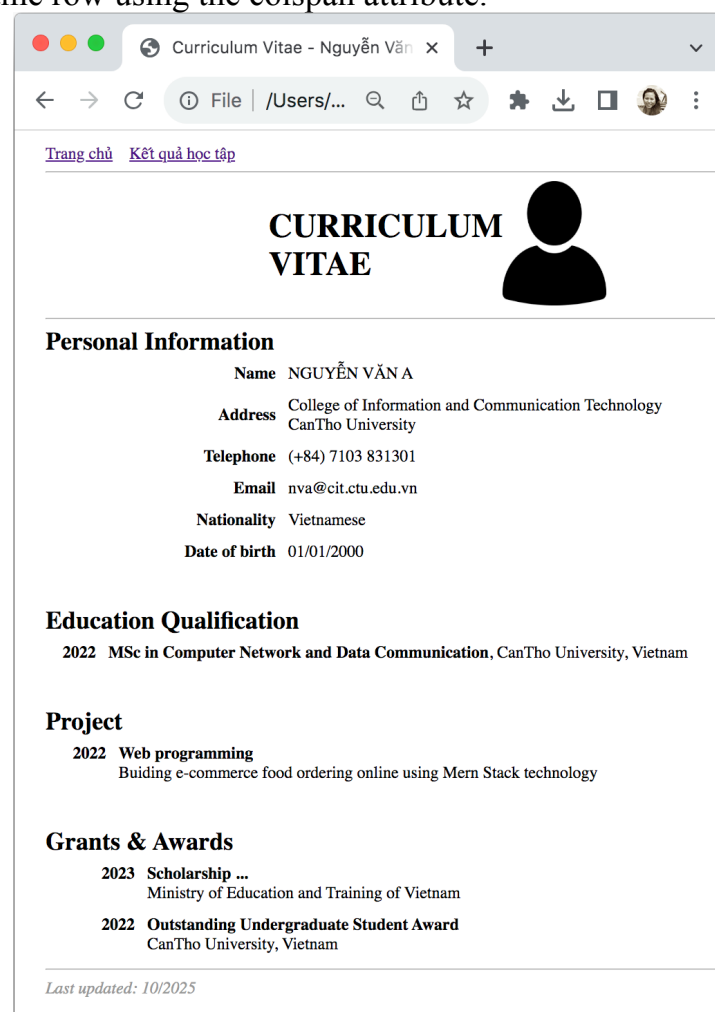

Figure 4. Curriculum vitae

Ex 6. Design a Recipe page for Vietnamese Sweet and Sour Soup (Canh Chua).

❖ **Objective:** Use all HTML tags introduced to design a recipe webpage.

❖ **Requirement:** design a webpage to introduce the recipe for the Vietnamese Sweet and Sour Soup as described in Figure 5 and Figure 6.

- The content width is about 700px and center-aligned.
- “Liên kết” (at the bottom of the pages): you can use any URLs.

❖ **Hint:** Suggested steps to create the recipe webpage:

1) Create the page content by inserting a table and placing the page’s content within it.

2) Format the webpage:

a. Headings: background-color: MistyRose, text color: Green.

b. User feedback:

- Using the nested table: create a table to contain the feedback. The width of this table is smaller than the outer table, and it is right-aligned to create a space between this table and the outer table.
- Each piece of feedback is placed in a row, with an empty row between the feedback.
